DUAL SEAL D.B&B

PLUG VALVES

GALLI&CASSINA in the World:

Our products are being used in the most important Plants and Gas Pipelines all over the world.

Galli&Cassina Plug Valves are used in the most important hydrocarbon plants and gas pipelines all over the world.

For over 70 years Galli&Cassina has been committed to provide service to the end-users with a full range of products ensuring total customer's satisfaction.

Galli&Cassina is represented by sales offices worldwide and you are requested to contact our main office in Italy for more details.

Galli&Cassina Profile

Galli&Cassina is a prominent Italian Company, leader in Design and manufacturing a complete range of Lubricated Plug valves.

The company is located in Solaro near to Milan (Italy)

Galli&Cassina was founded in 1919, and it is one of the oldest Italian companies which today is still in the valve business; in the beginnings G&C business activity was concentrated in the production of valves to serve the domestic growing market.

After the first ten years the company gradually turned its production towards the newly born Chemical Industry.

G&C was the first in Italy to produce valves in stainless steel and other special material in light with the demand of the

most important chemical companies. It was not possible to expand further the Milan factory which was built in 1930 and enlarged after the second world war.

Since 1991 **Galli&Cassina** has moved to a new location in Solaro (Milan) with modern building and facilities after 30 years of experience in chemical valves.

Galli&Cassina started the production of Plug Valves to serve the Oil & Gas worldwide market becoming one of the most significant supplier for all International Oil & Gas companies across the world.

with extensive offices and workshop covering 12.000 sq.mt. area including 5000 sq.mt. of covered space.

1. WORKSHOP & OFFICES.

2. WELDING.

3. MATERIAL RECEIVING.

4. TESTING AND INSPECTION.

5. PACKING AND SHIPPING.

6. WAREHOUSE.

Galli&Cassina is a world's leading manufacturer of plug valves for Oil & Gas and Chemical application since 1919. The company is located in Solaro near Milan (Italy) with extensive offices and workshop covering a 12.000 sq.mt. area including 5.000 sq.mt. of covered space.

Galli&Cassina's Quality Assurance System ISO 9001 has been assessed, approved and certified by Lloyd's Register as well as the Environmental Management System ISO 14001 and Occupational Health & Safety Systems

ISO 18001. Valves design is fully developed by **Galli&Cassina** technical department and it complies to API 6D requirements other than the applicable international standards.

Galli&Cassina sales activity covers most of the continents with a leading and growing presence in Europe, Middle East, North & South America and Far East thanks also to an extensive service network with subsidiaries, branch offices and distributors.

Galli&Cassina Dual Seal Double Block & Bleed valve has been included in the products range in order to merge **Galli&Cassina** consolidated plug valves know how with the new "Dual Seal" technology to approach a wider range of applications.

Galli&Cassina Profile

DBB Technical Descriptions

The Galli&Cassina Dual Seal Double Block & Bleed valve is a single valve that simultaneously blocks both the upstream and downstream flow while allowing the user to verify tightness using a manual or automatic body bleed system. They are designed for applications where positive shut-off, verifiable zero leakage and double block and bleed (DBB) capabilities are required.

The **DBB** feature is ensured by two slips with bonded in seals sliding on the tapered plug to achieve upstream and downstream tight shut-off sealing. During opening operation the plug is pulled up allowing the sliding slips to retract, than the plug starts the 90° rotation taking the slips completely out of the flow. During closing operation, the tapered plug takes the slips back to position, than it is pushed down forcing the slips against the body seats, providing the tight shut off sealing.

Main Features:

- Easy in line maintenance: Dual Seal Plug Valves have a design which makes simple the maintenance operation. The body slips can be replaced with the valve installed in line (depressurized and drained), just by removing the lower bonnet and replacing the slips with a pair of new ones.

- Long service life and Low Operational Torque: During valve operation the soft seals bonded in the slips are in contact with body seats only at the end of the expanding operation, while during the 90° run they are retracted, therefore they are not affected by friction against body seat.

- Verifiable Positive sealing: Individual seat sealing effectiveness can be easily verified by the operator at completion of every valve operation through body cavity bleed valve.
- Quick opening and closing time: Valve simple design makes very quick the opening and closing operation.

Main Media Handled:

- Refined Oil Products, such as Diesel, Kerosene, Gasoline, Jet Fuel etc..

Main Applications :

- Meter Stations.
- Integral Manifolds.
- Loading & Unloading Fuel tank farm.
- Tank Storage Isolations.
- Hydrant Systems Isolations.

Range Size: Dual Seal Plug valves

Class:
ASME/ANSI
150 up to Class 1500 Lb
Size:
DN 2" up to 36"
Class 150 - 300.

DN 2" up to 24"
Class 600.

DN 2" up to 10"
Class 900 - 1500.

Range Temperature:
-29 C° to 220 C°
(-22 F° to 428 F°)

**Over size available
upon Customer's
requested.**

*** See G&C silver catalogue "FULL BORE PRESSURE BALANCED TYPE WITH LGC* LUBRICATION SYSTEM".

Material Selection Guide for GALLI&CASSINA Valves

Trim materials are designed according to the service conditions.

- 1** Standard Carbon Steel Body and Plug. (ASTM-A216 WCB/WCC material) suitable for general services.
- 2** Carbon Steel Body and Plug (A352 LCB/LCC material) suitable for low temperature services.
- 3** Carbon Steel Body and Plug (ASTM A216WCB/WCC material) suitable for "SOUR SERVICE" (H₂S and CO₂) according to NACE-MR.01.75/Latest Edition.
- 4** Special Austenitic (6MO) and Ferritic-Austenitic Stainless Steel (Duplex and Superduplex) suitable for sea water and corrosive services.
- 5** Other materials upon request.

Pressure Relief System

The Automatic Body Bleed Valve provides visual, positive assurance that the Dual Seal has sealed completely at each cycling operation and prevents thermal pressure buildups in the body cavity.

An automatic bleed valve connected to the body cavity of the main valve is mechanically opened by the valve operator when the Dual Seal is closed. Seal integrity is indicated by viewing the discharge of the bleed valve.

When the Dual Seal is opened, the bleed valve is automatically closed by the combination of line pressure and the spring in the bleed valve.

Manual Bleed Valve to Atmosphere.*

A manual bleed valve is connected to body cavity, it can be opened after the Dual Seal valve is closed, in this way the seal effectiveness can be checked immediately. This bleed valve must be closed before to reopen the Dual Seal valve.

**Standard feature on Galli & Cassina Dual Seal Valves.*

Manual Relief to Atmosphere with Thermal Relief from Downstream and Body to Upstream.

This system is designed to relieve the overpressure of valve body cavity and downstream to upstream due temperature floating when the valve is closed. Further to standard manual bleed to atmosphere, this system has the addition of a thermal relief from downstream to upstream. The thermal relief system relieve to upstream when differential pressure exceeds 25 psi. The above system works when the valves part of the thermal relieve system are kept open and the manual body bleed valve to atmosphere is closed.

Manual Bleed Valve with Thermal Relief to Upstream.

This system is designed to relieve the overpressure of valve body cavity and to upstream due to temperature floating when the valve is closed. Further to standard manual bleed to atmosphere, this system has the addition of a thermal relief from valve body cavity to upstream. The thermal relief system relieve to upstream when differential pressure exceeds 25 psi.

Available Tests

Type of Test	Applicable Standards	Performance
X AND GAMMA RAYS	ANSI B16.34 - Annex-B ASME VIII - Div.1 - MSS - SP 54 ASTM E446 - E186 - E280	100% all butt welding ends and body.
DYE PENETRANT	ASME V - art.6 and 24 - ASTM E142 100% ANSI B16.34 - Annex-D MSS-SP-93	All butt welding ends
MAGNETIC - PARTICLES (Dry and wet)	ASME V - art.7 and 25 ANSI B16.34 - Annex C - MSS - SP 53	100% of all valves

POSITIVE MATERIAL IDENTIFICATION	ASTM A751	100% of pressure containing components

Applicable Standard-Specification

Lubricated Plug Valves are designed to use with most refining services according to API 599 or BS 5353 norms whichever is applicable.

API 6D norm aims to standardize the materials as well as instructions to manufacture valves suitable for energy transportation in the pipelines.

API 6D	Specification for Pipeline Valves.	BS 2080	Face to Face - Centre to Face - End to End - Steel Valves.
API 6FA	Specification for Fire Test for Valves.	BS 5353	Specification for Steel Plug Valves.
API RP6F	Recommended - Practice for Fire Test for Valves.	BS 6755 part 1	Testing of Valves (Spec. for Production Pressure Testing Requirements).
API 598	Valve Inspection and Testing.	BS 6755 part 2	Testing of valves (Spec. for Fire Safe Testing Requirements).
API 599	Steel Plug Valves Flanged or Butt Welding Ends.	CSA Z 245. 15	Canadian Standard Association.
ASME/ANSI B 16.5	Pipe Flanges and Flanged Fittings.	MSS-SP6	Standard Finish for contact Face of Pipe Flanges.
ASME/ANSI B 16.10	Face-to-Face and End-to-End Dimensions of Valves.	MSS-SP25	Standard Marking System for Valves.
ASME/ANSI B 16.25	Buttwelding Ends.	MSS-SP44	Steel Pipe Line Flanges.
ASME/ANSI B 16.34	Valves-Flanged, threaded and Welding Ends.	MSS-SP53	Quality Standard for Steel Casting-Magnetic Particle Examination Method.

Quality Assurance System

After 95 years of manufacturing experience and latest technology, **Galli&Cassina** Quality Assurance System has been assessed, approved and certified against the following quality assurance standards: ISO 9001-and API Q1.

Rigorous procedures and internal audits ensure that the Quality System is implemented at all stages: incoming materials, production, inspection, assembly, final test, packing and shipping. Every product is designed and

manufactured to comply with the latest applicable standards.

Quality Assurance Development

Galli&Cassina's Quality Assurance System ISO 9001-2008 - HSE ISO 14001 & ISO 18001 have been assessed, approved and certified by Lloyd's Register, while the API 6D and API 6A monograms have been certified by API (American Petroleum Institute): all the certificates are the result of **Galli&Cassina's** dedication towards the aim of good reputation in the world-wide valve market, since 95 years.

In addition **Galli&Cassina** Plug Valves are in compliance with CE Pressure Equipment Directive PED N. 97/23/EC and ATEX (N. 94/9/EC) for products intended for use in potentially explosive atmospheres.

Customer Service

Galli&Cassina's Customer Service is always willing to assist the customer with a prompt response to "service" requests.

Full after sales services assistance can be offered either at our workshop or on site, spare parts supply. Training programs, on operation and safety.

Application

Pipeline Isolation

Line Isolation is the most important point when the valve must shut-off the line, in process where sensitive fluid is critical for environmental and process safety. Dual seal plug valve is suitable to guarantee «0» leakage in both ends, (inlet/outlet), therefore it is the ideal solution as an isolation valve.

Flow Meter Calibration

One of the main applications of DBB expanding plug valve is for calibration of flow meter instrument on line, where «0» leakage allows the operator to set-up the instrument (flow-meter) without any risk of error in the measurement system of flow rate from wellheads through flow lines, gathering lines and high pressure transmission system in gas pipeline or in petrochemical plants or other processing.

Manifolds

Another application of DBB expanding plug valve is in Refineries at the manifolds loop, where there are different products (e.g. gasoline-diesel-jet fuel) without any contamination or risk to mix them up. Two, three or four way valves can be supplied.

Terminals-Oil Depots

The application of DBB expanding plug valves for loading and unloading tankers, requires the guarantee of a positive shut-off of the valves in order to avoid any environmental damage due to spillage.

Aviation Fuel Operation

Aviation fuel operation is commonly used in Airports. The DBB valves must guarantee a quickly close and reliable seal integrity. In case of emergency, the DBB valve can be dismantled very quickly and repaired by the replacement of the slips without any other adjustment, and put in operation very fast.
